Win% vs Scoring

Where each manager lives on the win-rate / scoring plane. The top-right is the dream; the bottom-left is the basement. Bubble size = rings.

Trade Fleecer Ledger

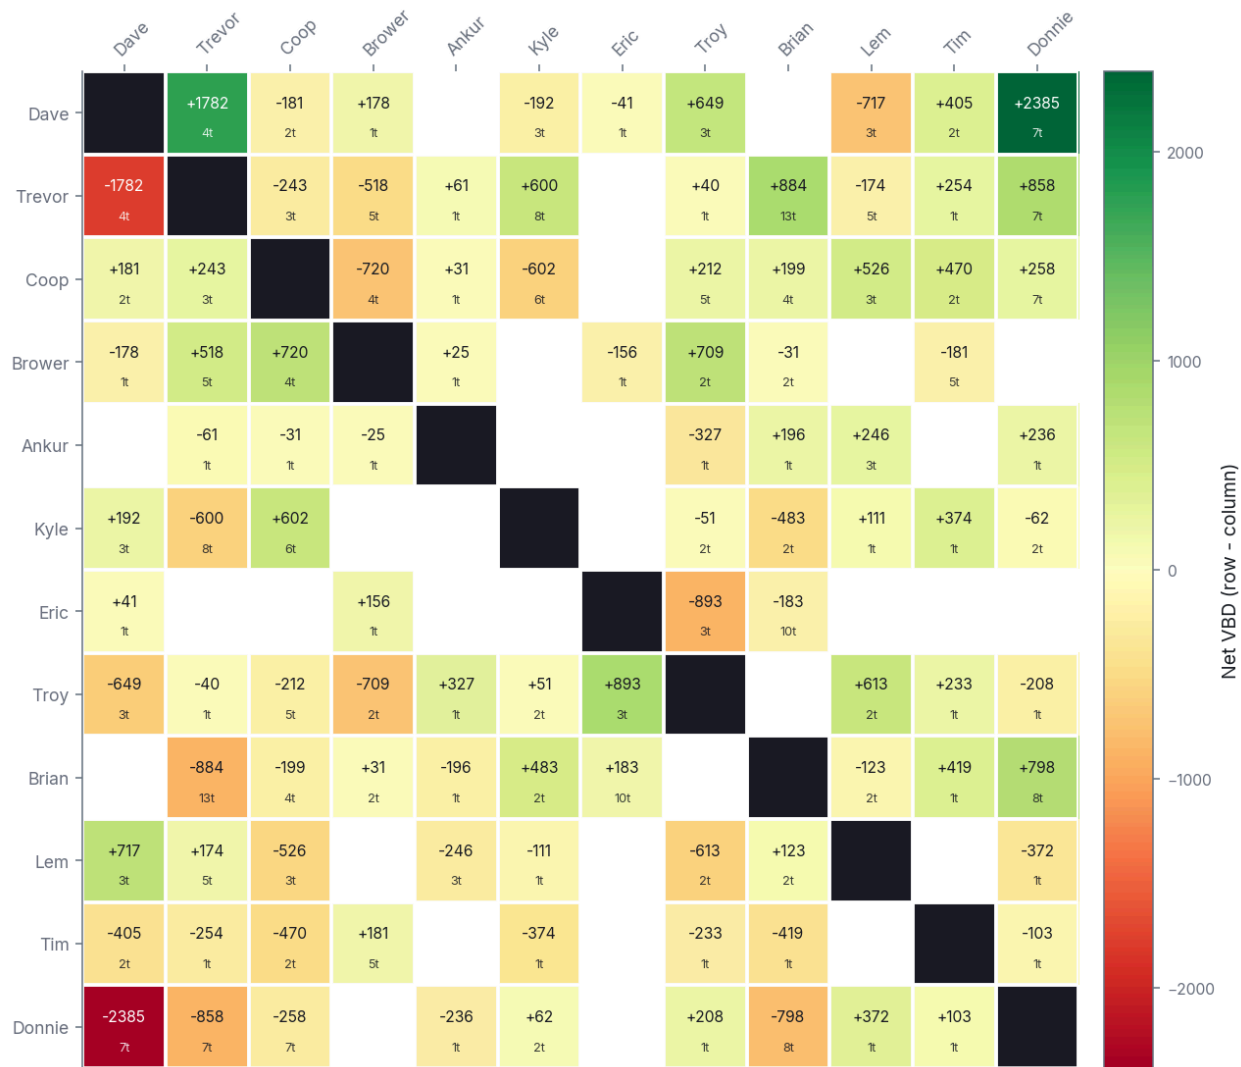

Net VBD across every scored trade (Yahoo 2011-2022 + Sleeper 2023-2024), including picks (scored as the rookie-year production of the player actually drafted). Green = won, red = lost.

Trade Fleecing Matrix

Every pairwise relationship in the league. Read across a row: *green cells* are managers this person fleeced, *red cells* are the ones who fleeced them. Number = net VBD; small subscript = trade count. Rows ordered by all-time OVR.

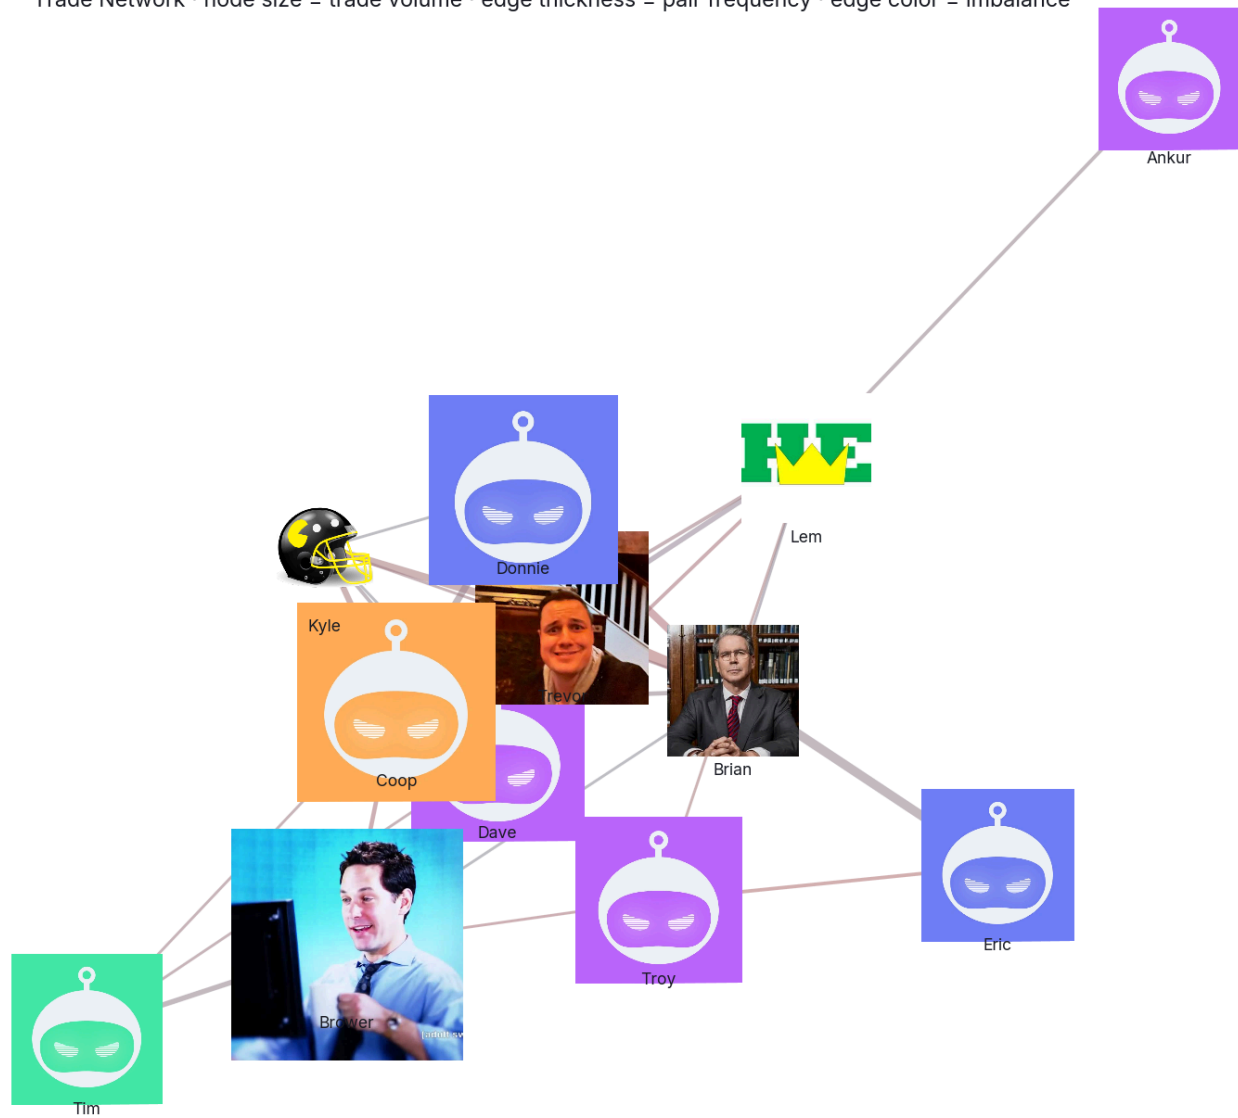

Trade Fleecing Matrix · ROW's net VBD vs COLUMN · green = row dominated, red = row got fleeced

Trade Network

Force-directed graph of the league's trade economy. Bigger node = trades more; edges show pair frequency (thickness) and imbalance (color depth). Managers who only trade with a few others get pulled to the periphery.

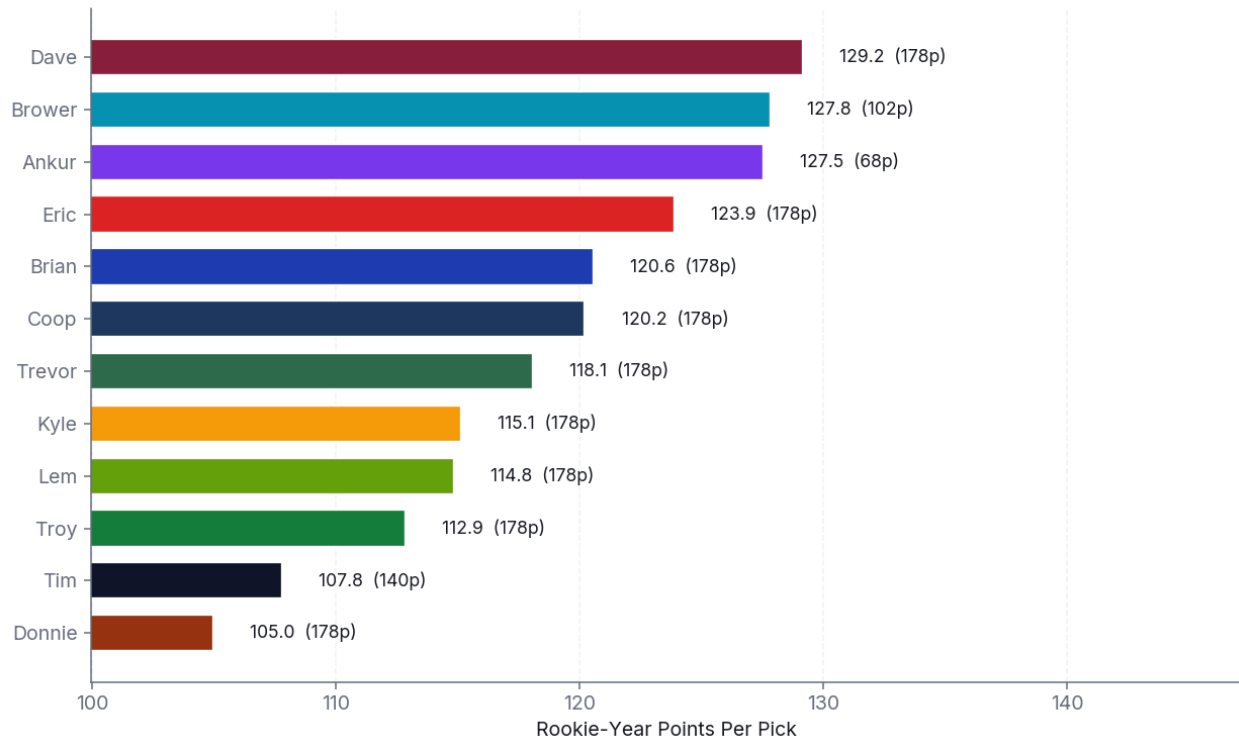

Trade Network · node size = trade volume · edge thickness = pair frequency · edge color = imbalance

Best Drafters

Rookie-year nflverse points produced by every player each manager drafted, normalized per pick.
Minimum 20 career picks to qualify.

Best Drafters · pts produced per pick made

Tenure Timeline

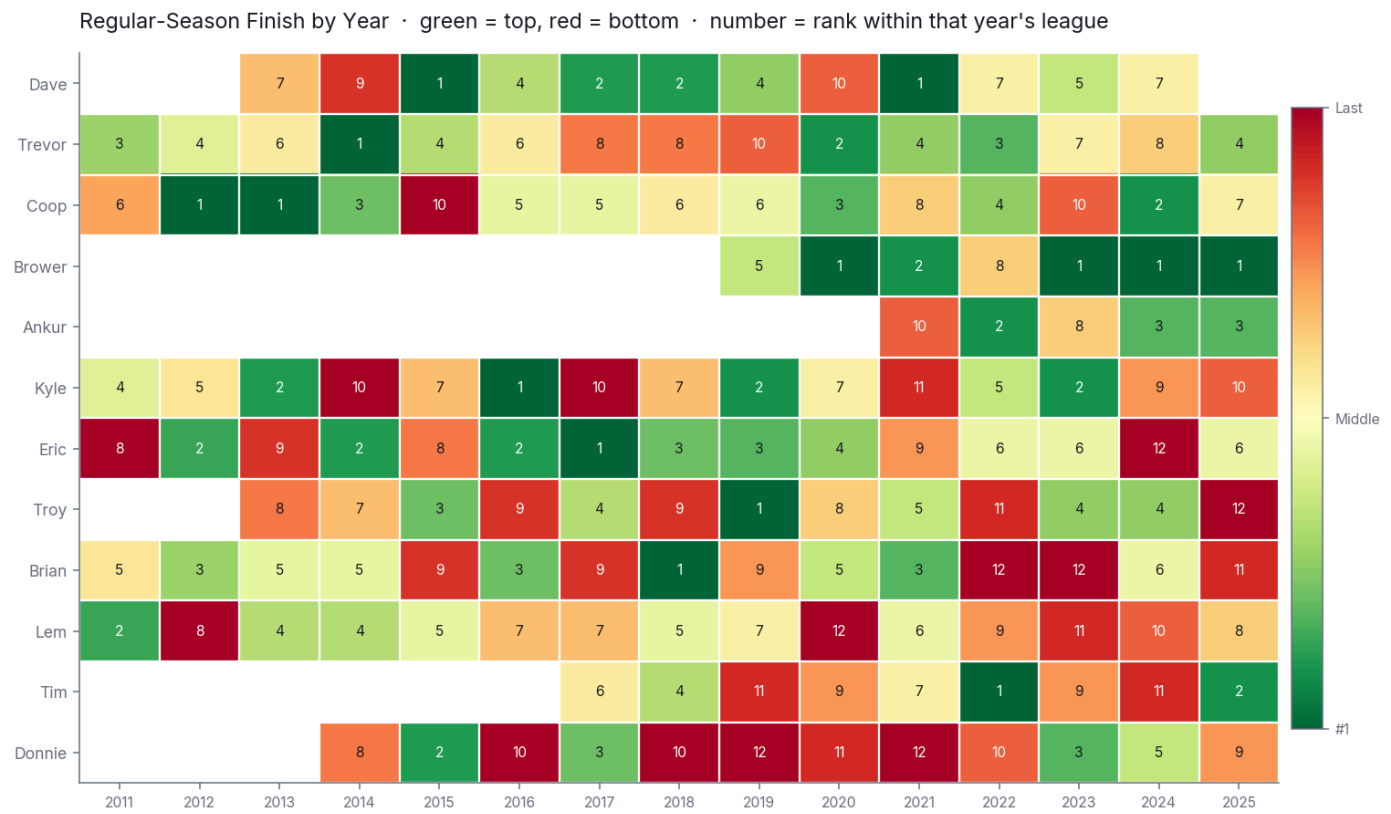

Who was in the league each year, with championships marked as gold stars. Shows how the league has evolved (8 → 10 → 12 teams) and who's been the most loyal.

Tenure Timeline · bars = active in league · gold stars = championships

Regular-Season Finish, Year by Year

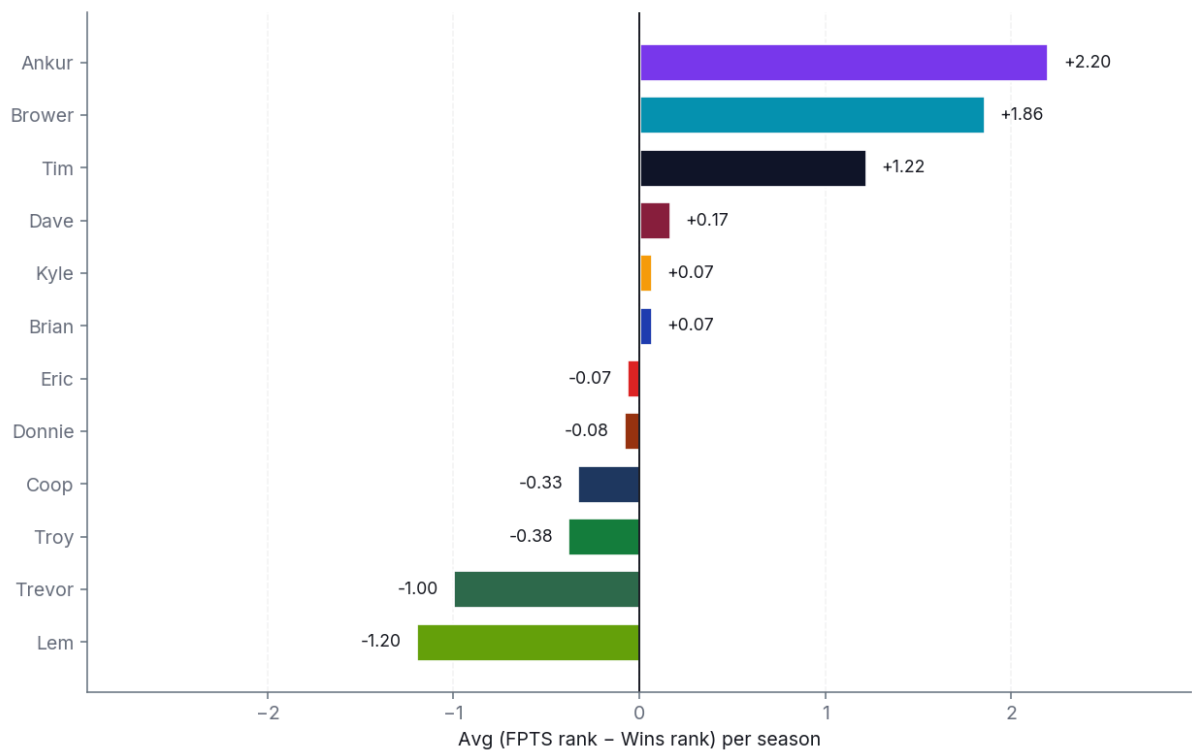

Each cell is where that manager finished in the regular-season standings that year (green = top, red = bottom). Reveals consistency, peak years, droughts.

Schedule Luck

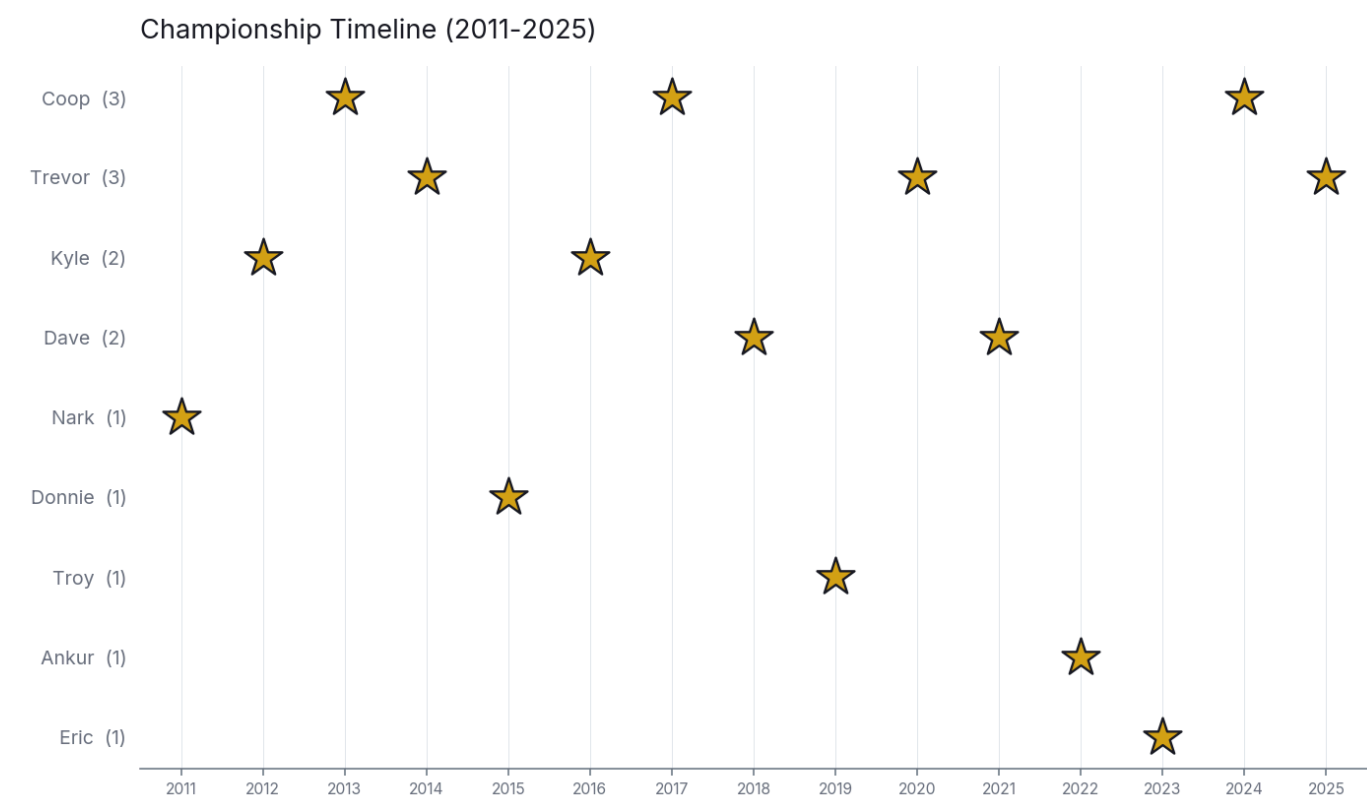

Average gap between FPTS rank and Wins rank across every season. **Positive** = won more games than their scoring deserved (lucky matchups). **Negative** = scored well but couldn't catch a break.

Schedule Luck · positive = won more than score suggested · negative = unlucky

Championship Timeline

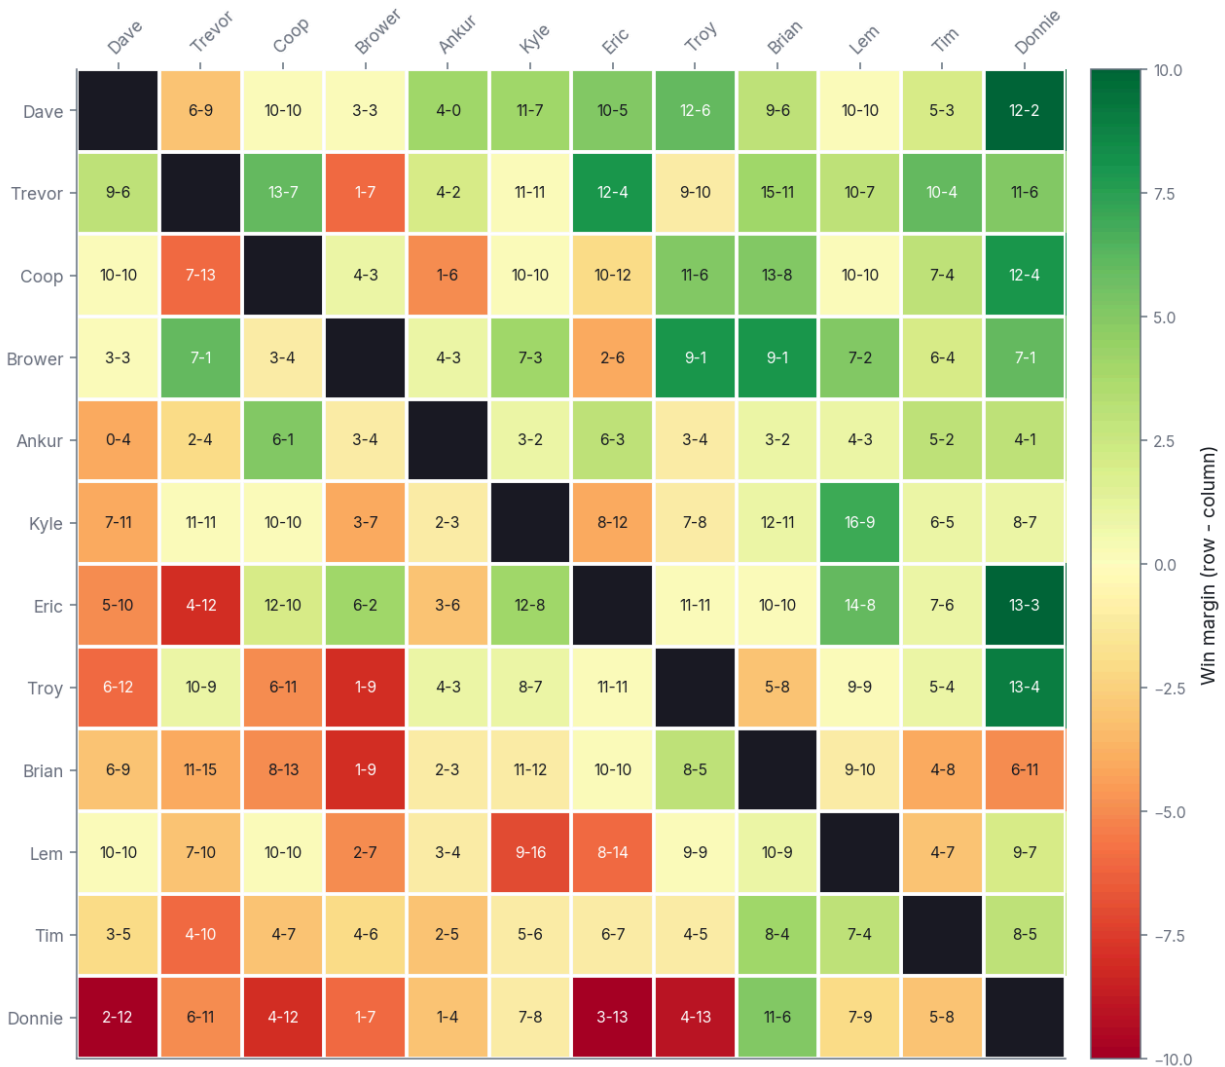

15 years of titles, one trophy per season. Rows ordered by total ring count.

Head-to-Head Career Matrix

Every pairwise regular-season matchup record. Cell = ROW manager's career W-L vs the COLUMN manager. Green = ROW dominant; red = ROW gets beat. Rows ordered by all-time OVR.

Head-to-Head Matrix · career regular-season record · ROW vs COLUMN · green = ROW dominant

Position Drafted by Round — Draft Strategy

Stacked position mix across each manager's entire drafting career (rounds 1-10). Reveals whether they reach for QBs early, hoard RBs, ignore TE, etc.

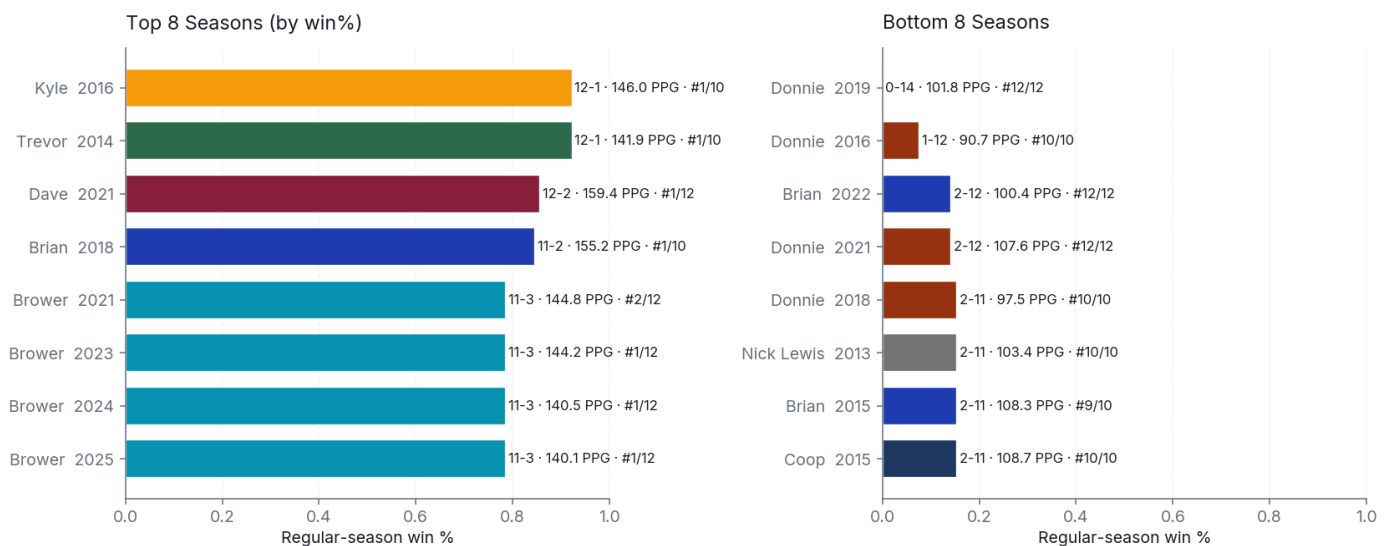

Positions Drafted by Round · rounds 1-10 · stacked counts across career

QB RB WR TE K DEF

Best & Worst Single Seasons of All Time

Top 8 and bottom 8 individual manager-seasons across 15 years of regular-season play (minimum 8 games).

Favorite Players — Drafted Multiple Times

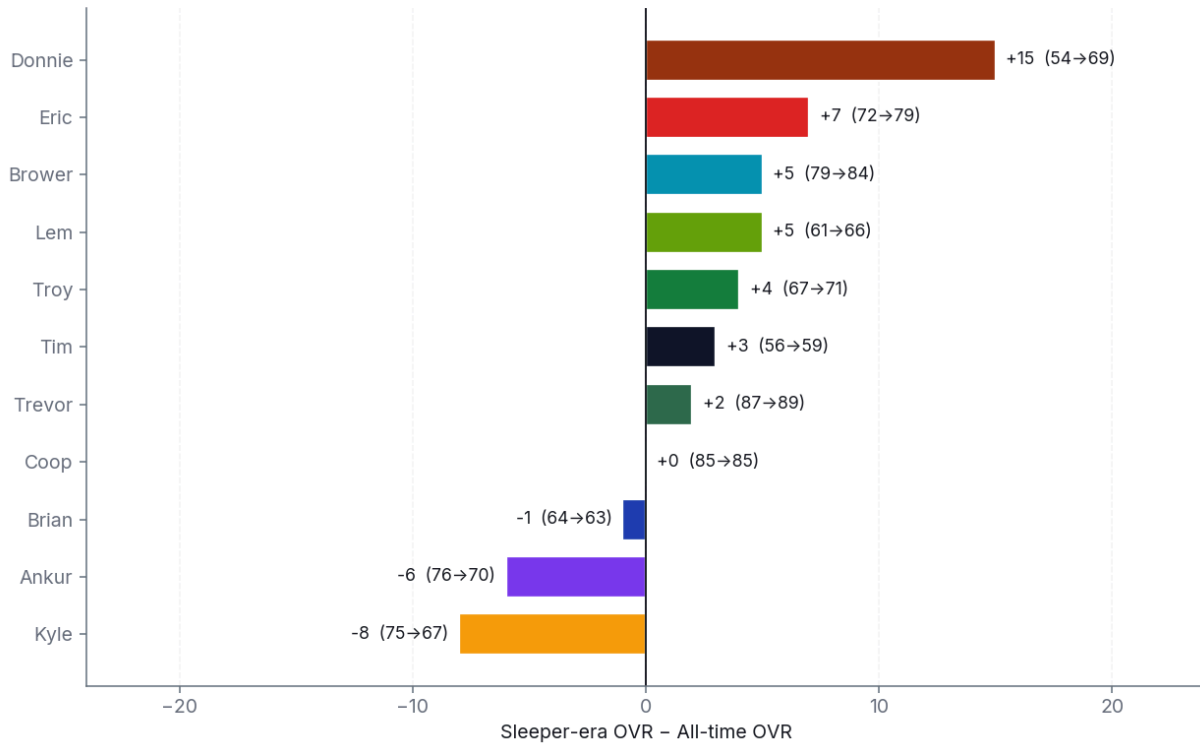

Players each manager has drafted in multiple seasons. The repeat targets reveal who manages by crush versus who casts a wide net.

Heating Up vs Cooling Off

Sleeper-era OVR minus all-time OVR. Positive = they're playing better than their career average suggests. Negative = falling off.

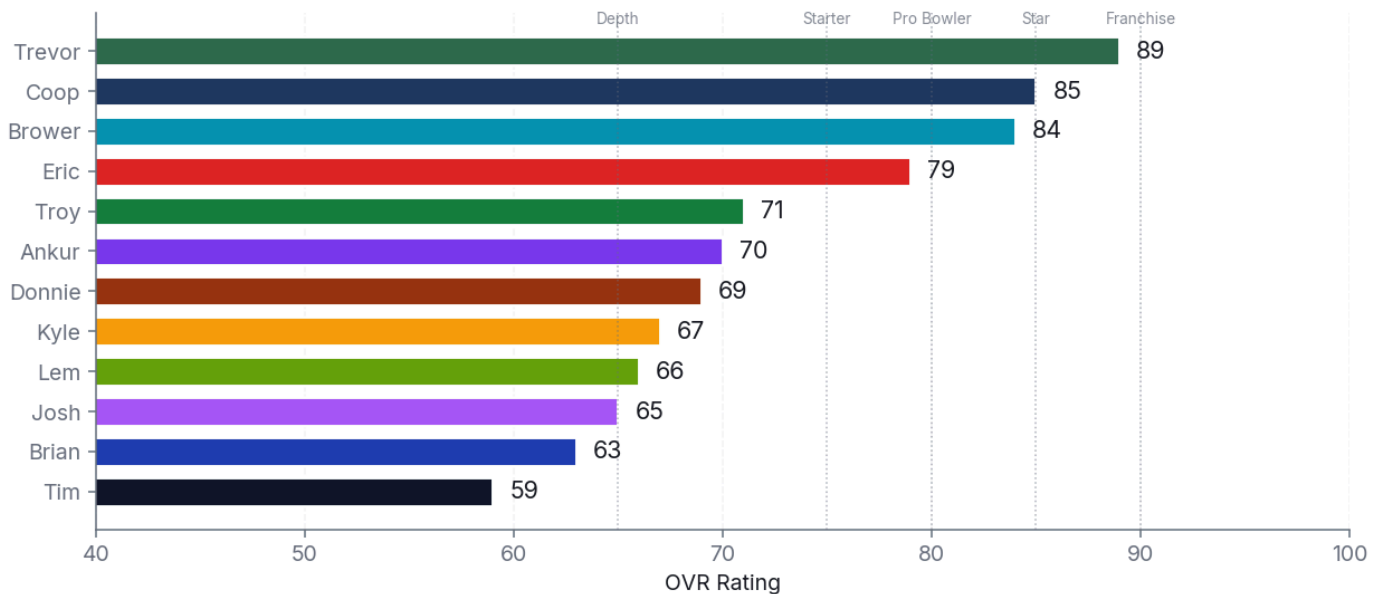

Recent vs Lifetime · who's heating up, who's cooling off

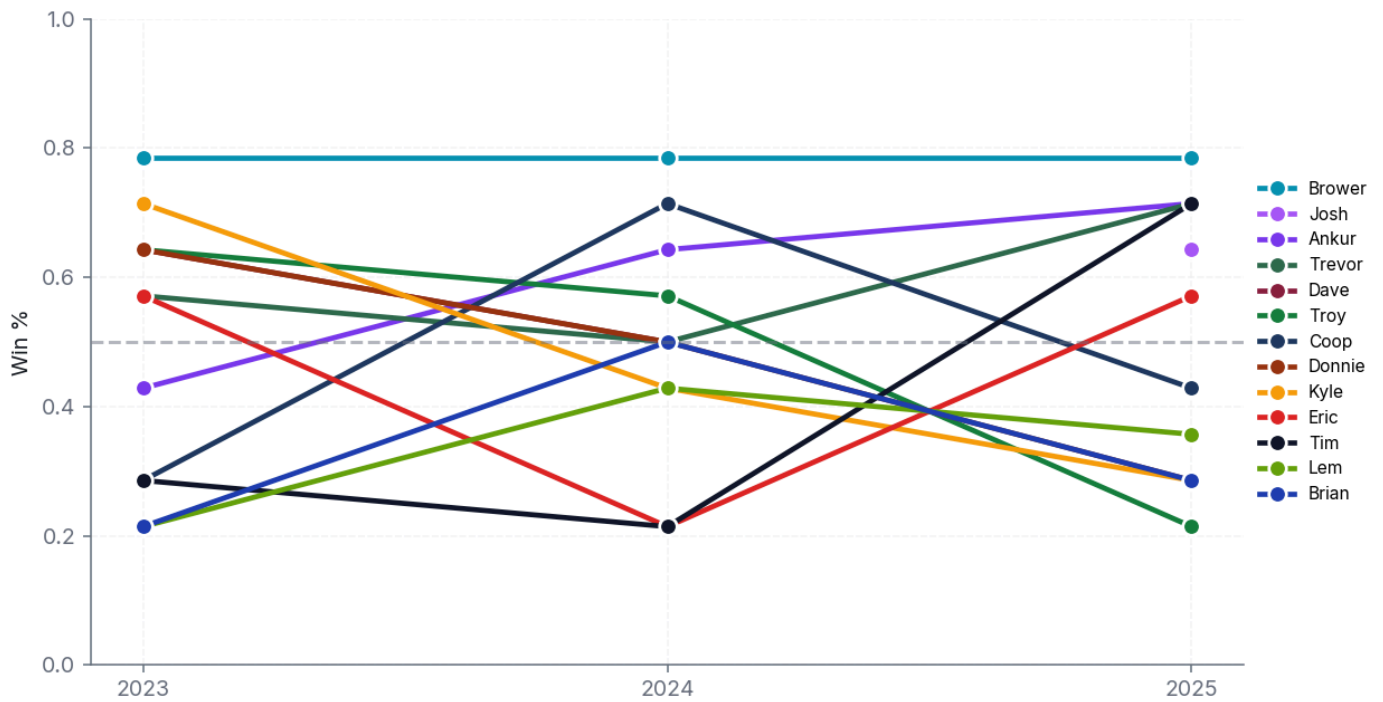

Sleeper Era (2023-2025)

The last 3 seasons only — recency view. Weights: Rings 26%, Win% 24%, Draft 23%, Trade 14%, PPG 13%. All 12 current rosters included regardless of tenure.

Methodology

Win/loss + PPG: regular-season games only (weeks 1-13 for 8/10-team years, 1-14 for 12-team years). Yahoo data via scraped matchups; Sleeper via league API. Rings: KNOWN_CHAMPIONS dict (Yahoo era) + winners_bracket.json (Sleeper era). Trade VBD: full-season nflverse fantasy points (0.5 PPR for 2019+, 0 PPR before) for players + rookie-year points of the player actually drafted at each traded pick (snake-order math against each year's actual draft data). Draft skill: total rookie-year points / total picks made. 2025 Sleeper trades excluded — no nflverse 2025 totals yet.
