Top Fleecers — Aggregate Ranking

Each manager's **total net point delta across every scored trade** they were ever in (Yahoo 2011-2022 + Sleeper 2023-2024). Positive = net winner, negative = net loser.

Picks are scored as the rookie-year nflverse points of the player actually drafted with that pick (resolved via Yahoo draft CSVs 2015-2022 + Sleeper drafts 2023-2025; cross-platform Yahoo→Sleeper picks resolved by manager identity). 2025 Sleeper trades and picks for the 2026 draft excluded — no season data yet. Yahoo picks for the 2012-2014 drafts are unresolved (no draft data that far back).

Methodology: Yahoo transactions scraped via authenticated session, parsed via HTML row-pairing (each trade = 2 consecutive `` rows with rowspan=2 trade icon). Sleeper trades pulled from offline data dump. Net point scoring uses full-season nflverse fantasy points (0.5 PPR for 2019+, 0 PPR before). Draft picks are resolved to the player actually drafted with that pick (snake-order math against each year's draft data) and scored using that player's points in the draft year.
