## Composite Ranking — frequency-weighted, post-trade weekly pts

Lineup×3 (every wk) + Draft×2 + Wire×2 + Trade×1. Trades valued by post-trade-week production only (Jayden Daniels W9 swap no longer credits the buyer with his W1-W8 points). Numbers = percentile (0-100, higher better).

Top-5 Manager Skill Profiles

## Where the value lives — mean VBD by round (recent-weighted)

### Key Insights

1. **Skill does not predict championships.** Eric (rank #1) won 2023; Coop (rank #10) won 2024; Trevor (rank #8) won 2025. Only 1 of 3 chips align with top-4 composite. Fantasy is variance-dominated over a 14-week sample; even the best manager wins ~30% of seasons.
2. **R2 is the highest-value single pick — even more than R1.** Snake-reversal puts elite-tier RBs and the rookie-WR breakouts (Hampton, Bowers) in R2 — mean +132 VBD vs R1's +124.
3. **Wait on QB to R4, hammer the bench R6-R8.** QB1 in R3-R4 wins on aggregate, then late picks find R7-R8 sleepers. R9-R12 deliver NEGATIVE mean VBD — trade those picks.
4. **Wire game compounds — Trevor's W1 2023 Puka pickup paid off across 3 seasons.** Top wire-game managers (Brower, Trevor) acquire 100+ players a year and convert 25-30% to positive-VBD hits.
5. **Drafting K/DEF in R14-R17 is the league's hidden edge.** 5 of the 12 biggest draft steals ever were R12+ kickers and defenses (Aubrey, Dicker, Tucker, Fairbairn, McPherson). Wait.
