Leaderboards

May 2026 · Sleeper era 2023-2025 · 42 regular-season games per manager

Twelve different lenses on who's been good at what — followed by a synthesis at the end.

Championships (the only ring that matters)

Year	Champion
2023	Eric
2024	Coop
2025	Trevor

Three different winners in three years. No repeat champs. Eight of twelve current managers still have zero titles in the Sleeper era. Each year someone different has unlocked it.

Regular-Season Wins (2023-25, 42 games)

Rank	Manager	Total W	Best year	Notes
1	Brower	33	—	
2	Ankur	25	—	
3	Josh	25	—	
4	Trevor	25	—	 2025
5	Donnie	20	—	
6	Troy	20	—	
7	Kyle	20	—	
8	Coop	20	—	 2024
9	Eric	19	—	 2023
10	Tim	17	—	
11	Lem	14	—	
12	Brian	14	—	

Brower has more regular-season wins than anyone — 33 of 42 (79%) — but no title. That's the playoff-variance tax: you can dominate the season and still get bounced in one bad Sunday.

True Team Strength — Expected Wins

Computed as **all-play expected wins**: your weekly score compared against every other team's that week. Removes schedule noise entirely.

Rank	Manager	Expected W	Actual W	Gap
1	Brower	33.2	33	-0.2
2	Coop	28.9	20	-8.9
3	Kyle	28.0	20	-8.0
4	Troy	27.6	20	-7.6
5	Eric	27.6	19	-8.6
6	Ankur	27.0	25	-2.0
7	Donnie	26.8	20	-6.8
8	Josh	23.6	25	+1.4
9	Brian	23.5	14	-9.5
10	Trevor	23.5	25	+1.5
11	Lem	22.8	14	-8.8
12	Tim	20.5	17	-3.5

This is **the most accurate measure of who's been good** in our league. Brower remains #1 (no surprise — most wins AND most points). What's striking is the gap between actual and expected for some managers: several teams below the actual-wins line have substantially MORE expected wins than their record shows. That's the schedule-luck story — quantified in its own table further down.

Total Points Scored (42 games)

Rank	Manager	Total PF	PPG
1	Brower	4952	117.9
2	Kyle	4790	114.1
3	Troy	4725	112.5
4	Coop	4699	111.9
5	Donnie	4666	111.1
6	Ankur	4624	110.1

Rank	Manager	Total PF	PPG
7	Eric	4574	108.9
8	Brian	4503	107.2
9	Josh	4502	107.2
10	Trevor	4499	107.1
11	Lem	4411	105.0
12	Tim	4318	102.8

Leader averages **117.9 PPG** vs the league median of ~109. That few-point edge week after week compounds into wins.

Playoff Appearances (out of 3)

Rank	Manager	Appearances	Titles
1	Brower	3/3	—
2	Ankur	2/3	—
3	Josh	2/3	—
4	Donnie	2/3	—
5	Troy	2/3	—
6	Eric	2/3	2023
7	Trevor	1/3	2025
8	Kyle	1/3	—
9	Coop	1/3	2024
10	Tim	1/3	—
11	Brian	1/3	—
12	Lem	0/3	—

Making the playoffs is the threshold question; winning one is a different game entirely. Several managers have made all three playoffs without converting; one champion did it on just one playoff appearance.

Consistency Index — Weekly Scoring CV

Rank	Manager	Avg PPG	StdDev	CV
1	Eric	108.9	16.9	15.5%
2	Brower	117.9	19.2	16.3%

Rank	Manager	Avg PPG	StdDev	CV
3	Lem	105.0	20.6	19.6%
4	Coop	111.9	23.1	20.6%
5	Troy	112.5	25.5	22.7%
6	Brian	107.2	24.4	22.7%
7	Tim	102.8	23.6	22.9%
8	Josh	107.2	25.1	23.5%
9	Donnie	111.1	26.2	23.6%
10	Trevor	107.1	26.0	24.3%
11	Ankur	110.1	27.3	24.8%
12	Kyle	114.1	29.2	25.6%

Coefficient of variation — lower = steadier week to week. Consistent rosters dodge the bad-week blowups that kill playoff seeding. Volatile rosters can boom-OR-bust; the bust weeks usually outnumber the booms.

Highest Single-Game Score

Rank	Manager	Best Game	When
1	Kyle	224.2	2023 W4
2	Josh	222.2	2023 W8
3	Troy	212.1	2023 W2
4	Donnie	199.0	2025 W3
5	Brian	195.1	2024 W12
6	Ankur	193.1	2025 W2
7	Trevor	191.2	2024 W9
8	Tim	182.4	2023 W2
9	Brower	182.4	2024 W8
10	Coop	180.3	2023 W8
11	Lem	177.7	2025 W7
12	Eric	176.1	2025 W3

The single-week explosions. These are the games you screenshot and never let anyone forget.

Draft VBD (3-year cumulative)

Rank	Manager	3-yr Draft VBD	Per year
1	Donnie	+1868	+623
2	Brian	+1548	+516
3	Lem	+1451	+484
4	Ankur	+1347	+449
5	Trevor	+1122	+374
6	Eric	+1051	+350
7	Tim	+858	+286
8	Josh	+803	+268
9	Coop	+720	+240
10	Brower	+601	+200
11	Troy	+581	+194
12	Kyle	+397	+132

Draft skill measured strictly: above-replacement points delivered by drafted players (keepers excluded). The champions (Eric, Coop, Trevor) all ranked top-5 here.

Drafting is the controllable thing that most correlates with winning.

Best QB Drafter

Rank	Manager	3-yr QB VBD
1	Eric	+625
2	Brian	+580
3	Trevor	+551
4	Brower	+547
5	Donnie	+527
6	Ankur	+450
7	Josh	+231
8	Tim	+129
9	Lem	+27
10	Troy	+8
11	Coop	-148
12	Kyle	-177

In a 2QB/SF league, QB drafting is the highest-leverage category. Top of this list = found a top-12 QB in the late rounds and rode him to multiple titles' worth of points.

Wire Production (FA adds only, no trades)

Rank	Manager	3-yr Wire pts	Hit rate
1	Trevor	+2002	11.6 pts/add
2	Brower	+1960	14.2 pts/add
3	Lem	+1933	26.5 pts/add
4	Coop	+1879	40.9 pts/add
5	Josh	+1814	20.9 pts/add
6	Troy	+1808	19.6 pts/add
7	Kyle	+1753	23.1 pts/add
8	Brian	+1652	18.0 pts/add
9	Ankur	+1350	17.5 pts/add
10	Eric	+1179	24.6 pts/add
11	Tim	+966	25.4 pts/add
12	Donnie	+827	37.6 pts/add

Wire pickup production excludes trade acquisitions (which are credited to the trade ledger, not the wire). Volume drives the top of this ranking; selective adders show up with high pts/add but lower totals.

Wire Activity — Total Adds (3 years)

Rank	Manager	Adds	Per Year
1	Trevor	173	58/yr
2	Brower	138	46/yr
3	Troy	92	31/yr
4	Brian	92	31/yr
5	Josh	87	29/yr
6	Ankur	77	26/yr
7	Kyle	76	25/yr
8	Lem	73	24/yr
9	Eric	48	16/yr
10	Coop	46	15/yr

Rank	Manager	Adds	Per Year
11	Tim	38	13/yr
12	Donnie	22	7/yr

Two valid strategies here: spray-and-pray volume vs selective tactical. The bottom of this list isn't bad — Donnie has the fewest adds and the highest hit rate. The middle of this list (~80-100 adds with low hit rate) is the worst zone — too active to be selective, too sparse to catch every league-winner.

Luck Standings — Actual vs Expected Wins

Rank	Manager	Actual W	Expected W	Luck
1	Trevor	25	23.5	+1.5
2	Josh	25	23.6	+1.4
3	Brower	33	33.2	-0.2
4	Ankur	25	27.0	-2.0
5	Tim	17	20.5	-3.5
6	Donnie	20	26.8	-6.8
7	Troy	20	27.6	-7.6
8	Kyle	20	28.0	-8.0
9	Eric	19	27.6	-8.6
10	Lem	14	22.8	-8.8
11	Coop	20	28.9	-8.9
12	Brian	14	23.5	-9.5

Positive luck = won more than your points deserved. Negative luck = the schedule has been hostile. **Trevor and Josh have been the league's beneficiaries. The most schedule-unlucky managers will regress upward in 2026 — that's not a hope, that's math.**

Synthesis — What the Data Actually Says

Pulling all twelve leaderboards together, here are the labels that the data supports — computed dynamically, no favorites:

Best overall team (most points, most wins, most expected wins): **Brower**. The only thing missing is a ring, which is a coin flip every January.

Most playoff appearances: Brower (3/3). Reliable contention every year.

Best drafter (+1868 3-yr VBD): **Donnie**.

 **Best QB drafter (+625): Eric.** The most valuable position group in our format.

 **Best on the wire: Trevor** (+2002 pts off waivers).

 **Steadiest team** (lowest CV at 15.5%): **Eric.** Almost never has a bad week.

 **Most volatile team** (25.6% CV): **Kyle.** When it's good it's great, but the bad weeks come for everyone eventually.

 **Single-week ceiling: Kyle** with a **224.2-point** explosion in 2023 W4.

 **Most schedule-lucky: Trevor** (+1.5 wins above expectation). Some regression coming in 2026.

 **Most schedule-unlucky: Brian** (-9.5 wins below expectation). Has been better than the record shows.

 **Most growth needed: Tim** (20.5 expected wins over 3 years). Mostly a scoring problem.

The big takeaway: this is a tight league. Outside of Brower's clear top-tier dominance and Tim's scoring struggle, the middle 9 managers are all within ~6 expected wins of each other across 42 games. Three different champs in three years isn't a coincidence — any of these teams can win it. The question is who'll have the peak draft year + a friendly schedule when their turn comes.

All rankings from offline Sleeper data dump. Regular season only (W1-W14). Draft VBD uses post-Yahoo-trade xlsx attribution for 2023. Wire production excludes trade acquisitions. "Expected wins" = $14 \times (\text{all-play wins} \div 462 \text{ max})$.
